"The 'Forgotten' Trick To Boost Your Chances Of Winning By Up To 50 Times"

By Lottery Guy
About Me

I've been busting lottery myths and exposing junk lottery systems online since 2004.

But it's still a dangerous world out there. You'll find a ton of junk online promoted as some amazing system to help you win the lottery. Some of it even looks glossy and convincing so be careful out there folks.

Always check my lottery system reviews here before being tempted by shiny things.

It'll save you a bundle of cash and wasted effort!

Be lucky,

Lottery Guy
Part 1:
Getting Your Game On

If you only ever do one thing that I teach - make it this one. Because it takes about 10 minutes of your time, costs you nothing yet significantly increases your chances of winning... forever.

Here's how.

The single most important decision you can make is which lottery game to play.

For most people this never even crosses their mind. And that lack of 10 minutes planning could be the very thing that cheats them out of a jackpot win.

Now I know you're already playing at least one lottery game. But we need to back up just a little here so I can explain.

But please trust me on this - get this step right first.
Do this and everything else I teach you here will be 10 times more effective.

I'm talking about 'synergy'.

**Dictionary: synergy**
The interaction of two or more forces so that their *combined* effect is greater than the sum of their individual effects.

What I mean is this OK:-

1. I teach you something that increases your chances of winning by 10 times.

2. Then I teach you something else that increases your chances by 10 times.

If you then do BOTH things (and I strongly recommend you do!), your chances of winning become not 20 times better but 100 times better! That's the power of synergy.

**Choosing Your Game**

I can guide you, but I can't actually tell you which game to play. Because that depends on you. It depends what you consider to be a 'big enough' sum of money to win.
This is so important. And most lottery players get it totally wrong!

We're attracted by big jackpots. And even more by those crazy rollover jackpots.

Forget 'em. Powerball is a mugs game!

Why?

Those enormous jackpots are created by rollovers. And rollovers happen where lotteries have been designed to be harder to win.

So the larger the jackpot the harder it is to win!

**How Much Is Enough**

Here's a much better way to attack this.

How big a jackpot would be enough. Would 100 million really make your life any different than 10 million?

So be honest now - how much would it take to change your life in the way you want?

If ten thousand would make the difference to your life, that's cool. Or if a couple of million is what rocks your boat, that's awesome too. But you need to know the answer.
What Games Are Available?

Find the official website for your lottery company. If you don't already know it, you may find the web address printed on your lottery tickets or playslips. (If not try searching Google for something like 'UK Lotto official site' or 'Canada lotto official site' etc)

Now most countries have more than one game you can play.

What I'd like you to do is compare those games to discover which one you should be playing.

Here's an example:-

"One of my lottery tips friends, Leslie, lives in Florida. She was playing the multi-state US Powerball game.

Now I don't blame her for picking that game. They advertised it a lot. And it was fairly new to Florida so was an exciting new toy.

And boy does it have some crazy exciting jackpots. Often over 100 million US dollars, sometimes over 200 million. Just for the jackpot prize. So what a great game to play eh...?

But do you know the odds of winning that jackpot?"
They are amongst the worst of any lottery game anywhere in the world. Your chances are worse than 1 in 175 million..!

**Truly awful.**

So my first piece of advice to Leslie was to pick a better game.

In the end she chose the 'Mega Money' game. It's top prize is only about 500,000 US dollars. But the odds of winning that prize are about 1 in 3 million.

**That's instantly FIFTY-EIGHT times better.**

(To get the same odds on Powerball she would have to buy 58 tickets!)

Now Mega Money wouldn't be the choice for everybody. Some would want to play for a higher prize than that. But this level of prize suited Leslie and switching game instantly gave her an enormous boost in her chances of actually winning it!

**How To Compare Games**

The odds for your local lottery games should be published on the official website of the lottery company. Sometimes they can be a bit hard to find, so dig deep for them. Typical places to look are sections called How To Play, Important
Information, Game Procedures, or even in the Terms and Conditions.

You will probably have to look at each game separately - after all they wouldn't want you comparing too easily now...

Here's an example from the Florida lottery website, firstly the Powerball game:-

<table>
<thead>
<tr>
<th>Match</th>
<th>Odds</th>
<th>Prize</th>
</tr>
</thead>
<tbody>
<tr>
<td>🔄🍎.FC</td>
<td>1:175,223,510</td>
<td>$40,000,000**</td>
</tr>
<tr>
<td>🔄🍎</td>
<td>1:5,153,632.65</td>
<td>$1,000,000</td>
</tr>
<tr>
<td>🔄🍎.FC</td>
<td>1:648,975.96</td>
<td>$10,000</td>
</tr>
<tr>
<td>🔄.FC</td>
<td>1:19,087.53</td>
<td>$100</td>
</tr>
<tr>
<td>🔄.FC</td>
<td>1:12,244.83</td>
<td>$100</td>
</tr>
<tr>
<td>🔄</td>
<td>1:360.14</td>
<td>$7</td>
</tr>
</tbody>
</table>

Sometimes these tables can be a bit confusing. But here you can see the top line shows the details for matching all 5 of the main (white) balls plus the (red) 'Powerball'.

So this means you have to 'match all 5 of the 5 balls drawn and the Powerball' to get the Jackpot.

The big number is the odds. This means your chances of winning that prize are 1 in 175,223,510.
(Confused about odds? Think of a dice. It has 6 sides each with a different number. When you roll it you get one number come up. So the odds of each number coming up are 1 in 6. Simple.)

Here's the details for the Mega Money game:-

<table>
<thead>
<tr>
<th>Prize Level</th>
<th>Estimated Prize*</th>
<th>Estimated Rolldown Prize***</th>
<th>Odds of Winning****</th>
</tr>
</thead>
<tbody>
<tr>
<td>4 of 4 + MEGABALL</td>
<td>$500,000*</td>
<td>N/A</td>
<td>1:2,986,522</td>
</tr>
<tr>
<td>4-of-4</td>
<td>$1,200**</td>
<td>$2,400</td>
<td>1:142,215.33</td>
</tr>
<tr>
<td>3 of 4 + MEGABALL</td>
<td>$350**</td>
<td>$700</td>
<td>1:18,665.76</td>
</tr>
<tr>
<td>3-of-4</td>
<td>$50**</td>
<td>$100</td>
<td>1:888.85</td>
</tr>
<tr>
<td>2 of 4 + MEGABALL</td>
<td>$25**</td>
<td>$50</td>
<td>1:638.15</td>
</tr>
<tr>
<td>2-of-4</td>
<td>$2**</td>
<td>$4</td>
<td>1:30.39</td>
</tr>
<tr>
<td>1 of 4 + MEGABALL</td>
<td>$3**</td>
<td>$6</td>
<td>1:76</td>
</tr>
<tr>
<td>MEGABALL</td>
<td>Free Ticket</td>
<td>N/A</td>
<td>1:32.68</td>
</tr>
</tbody>
</table>

Overall Odds: 1:12.58

So here we see:
4 of 4 + MEGABALL  $500,000  N/A  1:2,986,522

So matching 4 of the 4 balls plus the Megaball gets you $500,000. And you odds are 1 in 2,986,522.

Comparing Odds

Now the bigger the number the harder it is to win. That's because the big number is the total number of possible results.

So if everybody who played picked a totally different set of
numbers it would still need over 175 million people to play before you could guarantee 1 of them would win that Powerball jackpot!

So the lower the number the better.

**But here's another useful trick.** If you divide the big numbers from different games you can tell more clearly how much better the odds are.

So if we divide the big Powerball number by the big Mega Money number...

175,223,510 divided by 2,986,522

We get roughly 58. That means the Powerball is 58 times harder to win than Mega Money!

Or as I said to Leslie above, you would have to buy 58 Powerball tickets just to get the same chance of winning the jackpot as Mega Money..! Ouch.

**Don't Forget The Ticket Price!**

Make sure you also note down the ticket prices of all the games. After all, it's no good finding a game with better odds only to discover at the store the tickets are actually ten times the price!
Part 2:
Want Another HUGE Boost To Your Winning Chances?

Winning the lottery is simply about increasing your chances as much as possible. Then waiting for Lady Luck to visit!

Add this step too and you could be playing with 2,000 times the chance of winning than when you last bought a ticket! Remember the power of 'synergy'..?

So why not take a bunch of other peoples money, and buy lots of lottery tickets with that.

Seriously!

It's no secret! You have heard of this, it's called a lottery syndicate or lottery pool.

It's where you and some friends or work colleagues put your money together, buy tickets, and then split the winnings.

What better way to get a huge increase in your chances of winning without it costing you a bunch of money.

© 2012 Lottery-Guy.com. All Rights Reserved

www.Lottery-Guy.com
(If you can't remember the last time you won even the smallest prize - then a syndicate is a no brainer!)

**But You Have To Share..?**

Yes, you only get a share of the winnings, but with the right balance of players, game and tickets - your jackpot share will still be big enough.

Plus the added bonus that you might now actually win it!

You can start one yourself. This is cool because it lets you pick the game and determine the strategy - so long as you can find enough other people also wanting to play the same way. It's also the cheaper option.

But please don't underestimate the work of collecting money, buying tickets and distributing prizes.

It can be soul-destroyingly hard to explain for the 50th time to someone why they can't “just owe you this weeks”... :-)

**Let Someone Else Do The Work**

There are syndicates out there that are open to everyone, so do consider this if you don't want to run your own. Some are very much a one man band but can be good, whilst others are proper professional companies.
As with most things, you get what you pay for. You won't be able to pick the exact strategy of play when joining someone else's pool, but for an instant 50 times increase in your chances of winning, don't dismiss it too quickly!

You may even want to split your budget between buying your own tickets and playing in a pool, to get the best of both worlds.

If you want an amateur syndicate, ask around at work or ask friends and family if they play in one. Or if you're up for the challenge, start your own.

If you want a professional company to manage everything for you, click here for the ones I have personally used and can recommend.

You can join online now and start playing right away.

**Coming Soon...**

If you want a lot more tips and techniques for playing the lottery and winning more – look out for my strategy group.

It hasn't launched yet, but if you want to get on the early bird list click here. Then I'll keep you updated on progress, and let you in early.
It should be a lot of fun.

**Coming Next**

In my next free report we're going to be looking at more techniques to keep boosting your chances even further.

Look out for that in your inbox in a couple of days.

**And finally... time for your homework assignment...**
Your Homework For Tonight

1. Decide how big a prize is big enough for you.

2. Find out the odds, prizes and ticket costs for all the games you are interested in.

3. Work out which game gives you the prize you want at the lowest odds.

4. Think seriously about playing in a syndicate – this can be as well as your normal tickets (more about syndicates here)

Let me know if you want me to check your homework.
P.S.
Please Use This Info!

This report can seriously improve your chances of winning – if you use it!

Remember the power of 'synergy'?

Playing in the right game can increase your chances of winning around 10 to 50 times.

Joining a syndicate can increase your chances of winning around 50 times.

Do BOTH and you could be playing with **500 to 2,000 times the chance of winning** than when you last bought a ticket!

And that's why you haven't won a prize in a very long time..!
